SUBJECT:

9740 TigerSaw (00-64) Team meeting held

Discussion Items:

1. Carrying case design approval given to Custom-Pak. Tooling has started to meet our date.

Use test -Nail imbedded wood testing: Contamination is continuing to enter past the shaft seal and clogging the yoke joint at approximately cuts. We are trying the following on the next run: a) extruding the front seal stamping up to help shed contamination. b) adding a oiled felt washer to recip shaft to help shield the yoke joint. c) adding relief to the joint to reduce surface area. "P" order on recip shafts has been reactivated with longer shaft design.

3. Sandbox Testing. Fixture improvement is done. We are not currently testing because we are using our remaining keyed shaft for use test. "P" order will be written for pieces minimum to finish ESL and support Pilot lot sandbox units.

ECN's released: O-ring improvements released. Samples are on the way.

will be use on most to maximize PM parts are being expedited. 5. Numerous changes to strenath.

Parts should be here by 6. Boot material: Mold will be re-sampled in to support our test program. WL is trying to get scroll housing molded in

7. Field Testing: Two units returned with headed pin broken off. "P" order is in process for 52100, 4320, and 4320 steel per Bimal Chaterjee recommendation.

8. <u>UL Testing</u>: Radius change on the boot and a plug tooling are on order.

Gearing: New armature shafts are due for late ESL verification and Pilot lot.
 Manufacturing: Trimmed casting are due to start machining for Pilot Lot..

11. Pilot lot is in

12. "Tiger Claw" still under negotiation. We are moving ahead with TigerClaw artwork.

13. Individual part layout status will be reviewed and upgrade to help purchasing.

### Action Items: (date assigned)

1. Advise additional blades

2. Conduct trademark search for "Tiger Claw" and register same

3. Quote extruded shape for 879458 stamping

4. Follow up with steel for 902052pin

5. Logo development by

6. Conduct plunge and scroll test and jig saw plunge and test

7. Mock up reverse handle Tigersaw and forward to DKL

Test 303K HP.

#### Tigersaw Relaunch

1. Product Proposal is circulating for approvals. HP test in Test Lab on the motor.

2. DL presented preliminary renderings of proposed line.

3. Rotating handle was presented. Market value will be determined.

SUBJECT:

9740 TigerSaw (00-64) Team meeting held

Discussion Items:

- 1. Concern for lack of response from powdered metal parts. Purchasing/engineering will obtain timeline on the parts and follow up regularly. Will be use on most to maximize strength
- 2. AG will clear P-Orders this week. WL will review and make sure all purchase orders are placed.
- 3. Manufacturing: Two die-castings are here with the scroll housing casting due WL will follow up with manufacturing to be sure fixtures and gages are in place prior to machining parts for Pilot Lot.
- 4. ECN's released: Material changed to to Pilot. Approval given to texture all boots. No size adjustments planned prior to Pilot. Approval given to texture all boots.
- 5. Testing has been revised to duplicate failure seen on field tests. As a result the headed pin 902052 is showing more wear. BC has recommended using steel in addition to part will be expedited after material arrives.
- Use test -Nail imbedded wood testing: Contamination is continuing to enter past the shaft seal and clogging the yoke joint at approximately cuts. Additional testing will be done with extruded stamping to see if gains can be made.
- 7. Gearing: New armature shafts are due for late ESL verification and Pilot lot.
- 8. "TigerClaw" name, and label art was approved by the team. Labels will be printed and forwarded to photography by Memo sent to WW and BM on needed action.
- 9. Marketing will need units from Pilot.
- 10. Pilot lot is in

#### Action Items: (date assigned)

- Advise additional blade
- 2. Quote extruded shape for 879458 stamping
- 3. Follow up with steel for 902052 pin
- 4. Test and motors for HP.
- 5. Adam Gathers to issue safety review minutes
- 6. Talk to SK on "P" order issues.
- 7. Follow up with status of Patents
- 8. Retrieve comparable tests on Production Tigersaw

#### Tigersaw Relaunch

 Product Proposal is circulating for approvals. HP test request in Test Lab on the motor.

- 2. Drive shaft will be fabricated for 3/4" stroke length.
- 3. DH/DL will determine market value of rotate-able "D" handle.

#### **Discussion Items:**

- 1. (pm parts) has given delivery dates. Purchasing/engineering will follow up weekly to verify they are on schedule.
- 2. All P-Orders are on the factory floor. WL will review and make sure all purchase orders are placed.
- 3. <u>Manufacturing:</u> Fixtures are not complete. WL will follow up with JP on manufacturing fixtures needed to run Pilot Lot. AG and WL to determine status of production gauges and determine if QC fixtures will be used instead of production gauges during Pilot.
- 4. Production to expedite "P" orders on sandbox shaft to support testing.
- 5. Headed pin 902052 fabricated in steel is due from heat treat on and will be tested immediately.
- 6. <u>Testing:</u> cutting test will be run without drywall to verify component life beyond the point reached on previous runs. Current production units will be sandbox life tested ASAP. Sandbox life testing will resume as soon as shafts are available to verify life beyond hours.
- 7. Gearing: WL will follow up on un-knurled armature shafts that are due for late ESL verification and Pilot lot.
- 8. "TigerClaw" labels design is complete and photo units have been forwarded for carton art and instruction manual development. DH to supply feature and benefits ASAP.
- 9. Marketing will need units from Pilot.
- 10. Pilot lot is in

#### Action Items: (responsible part/date assigned)

- 1. Advise additional blades
- 2. Quote extruded shape for 879458 stamping
- 3. Talk to SK on "P" order issues.
- 4. Talk to JP on manufacturing fixtures
- 5. WL to review steel concerns with manufacturing
- 6. Carton feature and benefits to WW by
- 7. Retrieve comparable tests on Production Tigersaw

#### Tigersaw Relaunch

- 1. Product Proposal is circulating for approvals.
- 2. HP testing complete on
- 3. Drive shaft fabrication for ¾" stroke length is near completion.
- 4. DH/DL will determine market value of rotate-able "D" handle.

9740 TigerClaw (00-64) Team meeting held

#### Discussion Items:

- 1. Pilot date is slipping due to lack of verified machined gear housings (901162) and grooved pins (see item #3 and #4 for details). New date will be established on (901466) from All effort needs to be made to hold Pilot prior to shutdown.
- 2. Steel machining: No problems, capabilities study under way.
- 3. Aluminum machining: Gage for gear housing was late from outside source and had to be reworked several times. Gage to be at PC inspected and used to verify gr hsg machining on Additional castings are here if machining is not acceptable. Additional scroll hsgs and shoe brkts are being machined to try to improve surface finish and taper. SK to look into problems with "P" orders and gaging deliveries. Manufacturing is concerned with the production date of and will work to resolve all issues.
- Purchased pin 901466 from the state of the s 4. Purchased pin 901466 from
- 5. QC continues capability studies on Pilot lot parts.
- 6. All printed material will have TigerClaw text. TigerClaw trademark agreement is near.
- 7. Corrugated sleeve has been printed, delivery Manual is in stock, Carrying cases are molded and in transit.
- 8. Testing of latest pm components is at cuts (w/o drywall) without failure.
- performance on development/delivery of pm parts has been elevated by BC. Plan Concern with will be developed to minimize our risk on these parts.
- 10. Pilot lot ASAP.

### Action Items: (responsible party/date assigned)

#### 9740 TigerClaw

1. Scroll latch/square headed pin: Engineering/quality is reviewing increased spring force on scroll latch. Tooling for carbide square headed pin has started. Improved oil in the recip bearing will be tested to #2 gear grease with optimize wear under high torque cutting. tested.

confirms we are ok on our center distance with the 2. Gearing: Backlash study from between will make another study this week to include housing dimension pinion and gear axis. Unit passed sandbox life test at Production has had minimal noise since the center distance change.

all casting is greatly improved. Reports of 901074 guide sleeve 3. Manufacturing Issues: "backing off" during run in on a few units. Assembly station will be reviewed. Drivers on both thread stations have been changed from impact to torque limiting. Contamination and thread damage on threads. AG will look into material handling issues on guide sleeve/shaft/yoke. Gash in thread is being quote to help remove contamination.

4. Blade selection: We will use up stock of the 6" metal cutting blade and go to the 6" tapered wood blade. scrolling blade as soon as available. The 6" tapered blade will go to a

- 5. Keyless shoe: Bracket dimension is change back to pilot dimension. Roll pin has been extended.
- TigerClaw black leather jacket was modeled by Dave Hall.
- Round headed pin 904945 tooling is finished. Parts need to be shaved and heat-treated. 7.
- Instruction manual is finished except for pictures. Carton Production date is die and carrying case insert are being make. There is some risk on this product because a marketing Product Proposal has not been issued.
- Last order of 901463 bushing is undersized on OD. ( to verify size prior to shipping replacement parts
- 10. Study to be conducted to determine additional TigerClaw capacity w/o capital and assets needed to produce increased annual quantities specified by DH.

### Action Items: (responsible party/date assigned)

- 1. Determine corrective action on recip shaft threads/ material handling
- 2. Add timers to control amount of grease dispensed.
- Capacity study
- Post analysis meeting

### Tigersaw Relaunch PP 01-72

- 1. Product Proposal to be amended to include international models.
- 2. Rotatable handle unit shown. Cost and Market value to be determined. Part will be dyed black for field input. Stop will be added at
- 3. Handle design has preliminary approval; a surfaced foam model w/grip will be fabricated.
- 4. Exposed blade clamp: Engineering to determine availability/cost of ¼ turn blade clamp. Spreadsheet to be made with +/-'s of an exposed clamp.
- 5. Review of the keyless shoe design to be made with existed patents. Preliminary gear housing has been for review. forwarded to
- Gear ratio and motor power will be revisited. 6. Jam test results

## Action Items: (responsible party/date assigned)

- Determine availability of 1/4 turn collet
- 2. Fab handle with grip
- Spread sheet on exposed blade clamp
- Review keyless shoe patents
